Petition – Protect Sheephouse Creek

Friends of Sheephouse Creek opposes logging plans (1-08NTMP-004SON and THP1-08-025SON) proposed for Sheephouse Creek watershed, located between Duncans Mills and Jenner. A major Russian River tributary, Sheephouse Creek has been recognized by Fish and Game as potentially **one of Sonoma County's top three Coho regeneration streams**. These two similtaneous plans *should be considered as one* since they both bring potential for concurrent adverse cumulative impact. The plans furthermore lack quantitaive data supporting applicant claims they are safe and without deleterious effect on domestic water supply or the multi million dollar taxpayer funded Coho salmon restoration program, established since 2004.

We, the undersigned, submit to CALFIRE for inclusion in logging plan files 1-08NTMP-004SON and THP1-08-025SON, this statement of very strong concern that Sheephouse Creek water quality and quantity will be threatened by these plans. . We request that CALFIRE ascertain there be thorough oversight by CALFIRE staff and all responsible regulatory agencies in all aspects of the review process, in order to protect Sheephouse Creek and its watershed from significant environmental damage. We further request that these plans be denied should they fail to give quantitative accounting with guarantee that no adverse environmental impacts will be made upon this important watershed.
